

# Acquire the skills to efficiently manage your network

HPE Education Services for HPE Networking

## HPE Education Services can deliver:

- Greater adaptability to your network environment
- Better security throughout your network infrastructure
- Increased control and flexibility for mobile and remote network users
- Increased awareness about legal and regulatory requirements
- Higher levels of network and application availability

## Prepare your network for the business

The network is at the core of your business. As you face the demands of staying ahead of competition, it is important to have an efficient, fully-integrated network to support your business. More and more organizations today are grappling with issues of inconsistent network performance and the network being unable to support their growing business needs.

HPE Networking is one of the world's leading network vendors that helps customers adapt to today's rapidly changing network environment by supplying one of the best available products, solutions, and support. But even with the most sophisticated technology, producing increased return on your investment is not guaranteed.

To achieve the highest possible ROI, it is important that your staff is equipped with the right knowledge and skills to use HPE Networking solutions efficiently and effectively. They need to understand how the technology integrates with existing equipment and processes, and most importantly, how it aligns with overall business objectives. In addition to that, migrating, upgrading, and integrating third-party networking vendors can be challenging without proper competencies.

The simplest, and one of the most direct ways to overcome these challenges and meet those objectives is through HPE Education Services, with a series of courses and programs designed to give network administrators an outstanding understanding of the network's capabilities.

## Future-proof your network with HPE Networking training

HPE Education Services provides a comprehensive portfolio of technical training offerings that support the full range of HPE open standards-based network products and solutions. The trainings are available in multiple formats including instructor-led, virtual, and self-paced.

Here is how our courses are structured:

- Fundamental skills courses introduce key concepts to students.
- Advanced skills courses including interconnection, infrastructure, network security, wireless and mobility, network optimization and management, and convergence.

What's more, we have the flexibility that enables us to provide these trainings at 93 HPE learning centers worldwide, at your own location, or live online—delivered to desktop browsers 24x7x365.

## What can an efficient network do for your business?

Cloud computing is becoming the next step in the evolution of networks. Having open standards and the ability to integrate different technologies is a critical consideration for data centers. HPE Networking solutions are built to deliver predictable performance, high availability, and security, using products and technologies that offer scalability, cutting-edge features, energy efficiency, and reduced complexity. HPE Networking training enhances the skills necessary to design and implement those networking solutions in a converged infrastructure context, from SMB to enterprise; from the core to the edge of the data center.

With HPE Education Services, you can:

- Equip network administrators with the expertise for building the data center of the future, from the core to the edge.
- Acquire the right skills for architecting, implementing, and managing across the enterprise.
- Build competencies for migrating to open, standards-based, secure network solutions.
- Enable an open-standards network, making it easier to move away from proprietary network solutions.

## Why HPE?

- IDC MarketScape leader four years running for IT education and training<sup>1</sup>
- Recognized by IDC for leading with global coverage, unmatched technical expertise, and targeted education consulting services<sup>1</sup>
- Organizations perceive that technology vendors such as HPE provide better training than dedicated training firms in terms of quality, breadth and depth of offering, certification, delivery, and IT process training in addition to technical training<sup>2</sup>
- Complete continuum of training delivery options—self-paced e-Learning, custom education consulting, traditional classroom, video on-demand instruction, live virtual instructor-led with hands-on lab, dedicated onsite training
- Simplified purchase option with training credits
