

HP Business Availability Center Anywhere

Data sheet

Global Points of Presence

In recent years, IT management and operations have become progressively accountable to ensure critical applications meet uptime requirements, and the focus for these teams has become more application-centric. While it has been uncomplicated to monitor key applications from inside the firewall using HP Business Availability Center (BAC), expanding the monitoring outside the firewall has required either setting up a vast infrastructure or contracts with external vendors or using third-party monitoring tools.

The HP BAC Anywhere solution provides you the flexibility to extend your on-premise BAC monitoring solution to the HP Software-as-a-Service (HP SaaS)

Cloud. HP BAC Anywhere, delivered by HP SaaS, allows you to easily monitor the end-user experience from outside the firewall. HP SaaS maintains these Points of Presence (POPs) in key geographic locations, leveraging the extensive network infrastructure of significant ISPs around the world. The collected data is sent to your HP Business Service Management platform, allowing you to correlate the end-user experience from both inside and outside the firewall.

Below is a list of the locations available for your use in the HP SaaS Cloud.
