HPE 3PAR Storage Rebalance Service

Focus on your business. Let HPE rebalance your data.

Are you ready to take full advantage of what your HPE 3PAR Storage disk array architecture can really do?

Here are two reasons why your HPE 3PAR Storage system may need to be rebalanced in order maximize the performance of your array:

- You are upgrading your storage capacity. Following the upgrade, you need to rebalance data across all the drives in your HPE 3PAR Storage array.

- To better meet your business needs, your hardware configuration may need to change and your data may need to be rebalanced across the new configuration to, for example, implement data tiering, or effectively utilize your storage capacity.

This service provides analysis, planning, and implementation of data movement and/or physical movement of drive magazines within the HPE 3PAR array.

Why work with HPE

It's always good news when you find another way to get the most out of your HPE 3PAR Storage system. Using the HPE 3PAR Dynamic Optimization software, you can rebalance the data yourself, or purchase the HPE 3PAR Storage Rebalance Service. When you choose the latter, you can be assured of reduced implementation time and risk to your storage system.

Let us take on data rebalancing while your IT team stays focused on core tasks and priorities.

Service snapshot

The HPE 3PAR Storage Rebalance Service incorporates planning and coordination activities led by HPE Storage Services professionals to deliver a successful disk array rebalance. The service includes:

• **Creation** of a rebalance service plan

• **Service** implementation of the rebalance service plan

• **Verification** tests to confirm product functionality

• **Orientation** session to review changes made to the system

Note: This service may include physical movement of drive magazines within or between HPE 3PAR arrays and/or data movement within an HPE 3PAR array.

The path to converged storage simplified

Converged storage eliminates the boundaries that exist within outdated, siloed data center environments by combining management orchestration across servers, networks, and storage with scale-out, federated software and standardized hardware platforms that leverage proven HPE technology.

That's the definition of HPE Converged Storage. But it's really all about what converged storage can do for your business—helping you successfully transition from traditional IT environments to new models that allow you to focus less on current system operation and maintenance and more on forward-thinking business innovation.

Keep moving ahead

The HPE Storage Services portfolio is simply designed to speed service delivery, build for growth, and keep technology running.

We can help you transform traditional infrastructure, protect and optimize data, and accelerate the benefits of service-centric IT with a portfolio designed and delivered by the world's experts in converged storage architecture.

Trust our HPE Storage Services professionals to put our strategic and technical know-how to work across your entire infrastructure. We collaborate with your team to transform storage and data management. From strategy and alignment, to design and through implementation and support, we understand the needs of your data center—with an eye toward tomorrow and a focus on delivering results, no matter where you are in the journey to innovation.
