

Extend data security beyond active use

HPE Asset Recovery in brief¹

HPE Financial Services can help customers find new ways to plan for, acquire, consume and adapt the technology systems needed for business transformation.

Operational excellence for the New Style of Business

As technology needs evolve and change, full IT lifecycle strategies must be reconsidered to achieve greater efficiencies. Even the most experienced organizations are challenged by increasing security concerns, a growing number of business processes and an extensive list of regulation associated with IT removal and retirement. These factors, combined with the pressure to speed innovation and make room for new solutions can make IT Asset Management (ITAM) and recovery a complex journey. If not managed properly, businesses could be leaving their data vulnerable to a wide array of security threats.

A proactive asset recovery strategy can help you optimize the physical, financial and contractual aspects of your technology throughout the IT lifecycle.

Partner with an expert

Our experts work with you, helping to manage the complex process of retiring your data center technology in a secure, compliant, and environmentally friendly manner. Our goal is to minimize the effort required by you to refresh your IT infrastructure and allow you to focus on what matters—innovation and driving your business forward.

We offer data center asset recovery solutions that help you manage your IT assets on a continuous basis. As you refresh your servers, network and storage, we can help manage the end of use recovery process on a contract by contract basis.

¹ Certain terms and conditions may apply.

Customize your IT retirement

HPE Asset Recovery delivers a flexible, consistent process for retiring IT equipment. We can help you build a customized plan for your business' unique needs and navigate through over 163 applicable data security and environmental laws.

We work with you to manage each stage of the process, including transit, tracking, processing, security and resale or recycling. Our programs extend globally, providing you with the same high level of integrity, process control and expert support regardless of where your assets may be located. Our Technology Renewal Centers around the world process safely and responsibly recycle an average of 11 million pounds of material every year.

We are committed to maintaining your brand's credibility and security. We do this by:

- Ensuring data security and adherence to business processes
- Managing global scope and capabilities with quality and consistency

- Driving revenue through monetizing no longer useful owned assets
- Delivering global reach and expertise with presence in over 50 countries
- Flexibility to handle a range of requirements including desktops and data center
- Align to sustainability and environmental initiatives

Let us help streamline your IT asset recovery process. As your partner, we help you help minimize the effort required to refresh IT infrastructure when your business demands innovation, putting you in control of a sustainable and responsible IT asset management strategy that you can be proud of.
