

Define business requirements

HPE Security Business Requirements Mapping

Identify your goals and how to get there

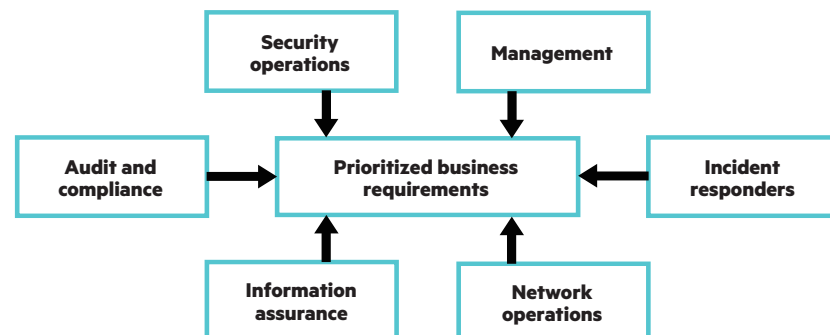

Many organizations face challenges when it comes to defining business requirements and creating an execution plan. HPE Security Business Requirements Mapping Service is designed to help customers plan the development or optimization of an internal security monitoring capability integrated with a Security Information and Event Management (SIEM) technology. This workshop identifies the most pressing business requirements for your security operations organization and a roadmap that includes security operations best practices uncovered by HPE Security Products Global Services in working with hundreds of security operations groups.

Service implementation

This workshop is focused on:

- Enabling you to better understand how to use the powerful HPE Security Products optimally in your environment.
- Defining your business requirements that need to be addressed then prioritizing them.
- Utilizing our consultant's broad industry experience to design a customized solution including a detailed plan of execution.

The professional services consultants will also provide recommendations for next steps to continually increase the benefit received from your HPE Security products and your security organization.

Benefits of the Business Requirements Mapping Service from HPE

This service will ensure that you have the knowledge to successfully build, staff, run, and optimize your security operations around your specific business needs. Specifically, you can:

- Identify and define business requirements for your security operations organization.
- Transform high-level business use cases into use case definitions and organizational processes and procedures.
- Leverage consultants with deep experience in enterprise security operations to assess the people, process, and technology implementation of your security operations and how those aspects meet underlying business objectives.

Benefits

- Understand producers and consumers of security information and how it effects business requirements prioritization.
- Map requirements to compliance regulations, IT governance, and your software development lifecycle.

- Understand the SIEM infrastructure and related technology to ensure attacks are identified, analyzed, and remediated in a cost-effective manner.
- Develop a roadmap to build your security operations capability.

HPE Security Products Global Services

HPE Security Products Global Services take a holistic approach to building and operating cyber security and response solutions and capabilities that support the cyber threat management and regulatory compliance needs of the world's largest enterprises. We use a combination of operational expertise—yours and ours—and proven methodologies to deliver fast, effective results and demonstrate ROI. Our proven, use-case driven solutions combine market-leading technology together with sustainable business and technical process executed by trained and organized people.
