

# HPE 5500 HI TAA-Compliant Switch Series

## Product overview

The HPE 5500 HI TAA-Compliant Switch Series comprises Gigabit Ethernet switches that deliver outstanding resiliency, security, and multiservice support capabilities at the edge layer of data center, large campus, and metro Ethernet networks.

With Intelligent Resilient Fabric (IRF) support and available dual power supplies, the 5500 HI TAA-Compliant Switch Series can deliver the highest levels of resiliency and manageability. In addition, the PoE+ models provide up to 1,440 W of PoE+ power with the dual power supply configuration.

Designed with two fixed 10GbE ports and extension module flexibility, these switches can provide up to six 10GbE uplinks or 70GbE ports. With complete IPv4/IPv6 and MPLS/VPLS features, the series provides investment protection with an easy transition from IPv4 to IPv6 networks.

## Key highlights

- High expandability for investment protection
- Premium resiliency and integrated management
- Enhanced MPLS/VPLS support
- Full-featured IPv4/IPv6 dual stack
- Up to 1,440 W of PoE+ power using dual power supplies for high resiliency

## Features and benefits

### Quality of service (QoS)

- Advanced classifier-based QoS

Classifies traffic using multiple-match criteria based on L2, L3, and L4 information; and applies QoS policies such as setting the priority level and rate limit to selected traffic on a per-port or per-VLAN basis

- Traffic policing

Supports Committed Access Rate (CAR) and line rate

- Powerful QoS feature

Creates traffic classes based on access control lists (ACLs), IEEE 802.1p precedence, IP, and DSCP or Type of Service (ToS) precedence; supports filter, redirect, mirror, or remark; and supports the following congestion actions: strict priority (SP) queuing, weighted round robin (WRR), weighted fair queuing (WFQ), weighted random early discard (WRED), weighted deficit round robin (WDRR), SP+WDRR, and SP+WFQ

- Storm restraint

Allows limitation of broadcast, multicast, and unknown unicast traffic rate to reduce unwanted broadcast traffic on the network

### **Management**

- Friendly port names

Allows assignment of descriptive names to ports

- sFlow (RFC 3176)

Provides scalable ASIC-based wire-speed network monitoring and accounting with no impact on network performance; this allows network operators to gather a variety of sophisticated network statistics and information for capacity planning and real-time network monitoring purposes

- Complete session logging

Provides detailed information for problem identification and resolution

- Remote configuration and management

Enables configuration and management through a secure Web browser or a CLI located on a remote device

- Manager and operator privilege levels

Provides read-only (operator) and read/write (manager) access on the CLI and Web browser management interfaces

- Management VLAN

Segments traffic to and from management interfaces, including the CLI/telnet, Web browser interface, and SNMP

- Command authorization

Leverages RADIUS to link a custom list of CLI commands to an individual network administrator's login; an audit trail documents activity

- Secure Web GUI

Provides a secure, easy-to-use graphical interface for configuring the module via HTTPS

- SNMPv1, v2c, and v3

Facilitate centralized discovery, monitoring, and secure management of networking devices

- Remote monitoring (RMON)

Uses standard SNMP to monitor essential network functions; supports event, alarm, history, and statistics groups as well as a private alarm extension group

- Remote intelligent mirroring

Mirrors ingress/egress ACL-selected traffic from a switch port or VLAN to a local or remote switch port anywhere on the network

- In-service software upgrade (ISSU)

Enables operators to perform upgrades in the shortest possible time, while helping minimize the risk of disruption to network operations or traffic

### **Connectivity**

- Auto-MDIX

Provides automatic adjustments for straight-through or crossover cables on all 10/100 and 10/100/1000 ports

- Packet storm protection

Helps protect against broadcast, multicast, or unicast storms with user-defined thresholds

- Ethernet operations, administration, and maintenance (OAM)

Detects data-link-layer problems that occurs in the “last mile,” using the IEEE 802.3ah OAM standard; and monitors the status of the link between two devices

- Flow control

Provides back pressure using standard IEEE 802.3x, reducing congestion in heavy traffic situations

- Fixed 10GbE ports

Provides two fixed SFP+ ports for a 20GbE connection to the network without the need for additional extension interface modules

- Optional 10GbE ports

Deliver, through the use of optional modules, additional 10GbE connections, which are available for uplinks or high-bandwidth server connections; and flexibly support XFP, SFP+, or CX4 local connections

- Optional 8-port SFP module

Adds up to eight additional wire-speed Gigabit Ethernet ports for unprecedented Gigabit density in a single 1U enclosure

- Jumbo packet support

Supports up to 12,288-byte frame sizes to improve the performance of large data transfers

- High-bandwidth CX4 local stacking

Achieves 12 Gb/s per connection when using local CX4 stacking, allowing for up to 96 Gb/s total stacking bandwidth (full duplex) in a resilient stacking configuration

- IEEE 802.3at Power over Ethernet plus (PoE+)

Provides up to 30 W per port that allows support of the latest PoE+-capable devices such as IP phones, wireless access points, and security cameras, as well as IEEE 802.3af-compliant end devices; and helps eliminate the cost of additional electrical cabling and circuits that would otherwise be necessary in IP phone and WLAN deployments

**Performance**

- Hardware-based wire-speed ACLs

Help provide high levels of security and ease of administration without impacting network performance with a feature-rich TCAM-based ACL implementation

- Non-blocking architecture

Delivers up to 224 Gb/s of wire-speed switching with a non-blocking switching fabric and up to 167 million pps throughput

**Resiliency and high availability**

- Separate data and control paths

Separates control from services and keeps service processing isolated; and increases security and performance

- Device Link Detection Protocol (DLDP)

Monitors link connectivity and shuts down ports at both ends if unidirectional traffic is detected, helping prevent loops in STP-based networks

- IRF

Creates virtual resilient switching fabrics, where two or more switches perform as a single L2 switch and L3 router; switches do not have to be co-located and can be part of a disaster-recovery system; servers or switches can be attached using standard LACP for automatic load balancing and high availability; and helps eliminate the need for complex protocols such as Spanning Tree Protocol, Equal-Cost Multipath (ECMP), or VRRP, simplifying network operation

- Rapid Ring Protection Protocol (RRPP)

Connects multiple switches in a high-performance ring using standard Ethernet technology; traffic can be rerouted around the ring in less than 50 ms, reducing the impact on traffic and applications

- Smart link

Allows 50 ms failover between links

- Virtual Router Redundancy Protocol (VRRP)

Allows groups of two routers to dynamically back each other up to create highly available routed environments

- IRF capability

Provides single IP address management for a resilient virtual switching fabric of up to nine switches

**Manageability**

- Dual flash images

Provides independent primary and secondary operating system files for backup while upgrading

- Multiple configuration files

Allow multiple configuration files to be stored to a flash image

- IEEE 802.1AB Link Layer Discovery Protocol (LLDP)

Facilitates easy mapping using network management applications with the LLDP automated device discovery protocol

- Troubleshooting

Allows ingress and egress port monitoring, enabling network problem solving; and facilitates virtual cable tests, providing visibility into cable problems

- IPv6 management

Future-proofs networking, as the switch is capable of being managed whether the attached network is running IPv4 or IPv6; and supports pingv6, tracertv6, Telnetv6, TFTPv6, DNSv6, and ARPv6

### **L2 switching**

- GARP VLAN Registration Protocol

Allows automatic learning and dynamic assignment of VLANs

- IP multicast snooping and data-driven IGMP

Helps prevent flooding of IP multicast traffic

- Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) protocol snooping

Controls and manages the flooding of multicast packets in an L2 network

- 32K MAC addresses

Provide access to many L2 devices

- IEEE 802.1ad Q-in-Q and selective Q-in-Q

Increase the scalability of an Ethernet network by providing a hierarchical structure; and connect multiple LANs on a high-speed campus or metro network

- 10GbE port aggregation

Allows grouping of ports to increase overall data throughput to a remote device

- Spanning Tree/MSTP, RSTP, and STP root guard

Help prevent network loops

- 32 MSTP instances

Allow multiple configurations of STP per VLAN group

### **L3 services**

- Loopback interface address

Defines an address in Routing Information Protocol (RIP) and Open Standard Path First (OSPF), improving the diagnostic capability

- Address Resolution Protocol (ARP)

Determines the MAC address of another IP host in the same subnet; and supports static ARPs; a gratuitous ARP allows detection of duplicate IP addresses; and a proxy ARP allows normal ARP operation between subnets or when subnets are separated by an L2 network

- Dynamic Host Configuration Protocol (DHCP)

Simplifies the management of large IP networks and supports the client and server; DHCP relay enables DHCP operation across subnets

- User Datagram Protocol (UDP) helper function

Allows UDP broadcasts to be directed across router interfaces to specific IP unicast or subnet broadcast addresses; and helps prevent server spoofing for UDP services such as DHCP

**L3 routing**

- IPv4 routing protocols
  - Support static routes, RIP, OSPF, ISIS, and BGP
- IPv6 routing protocols
  - Provide routing of IPv6 at wire speeds; and support static routes, RIPng, OSPFv3, IS-ISv6, and BGP4+ for IPv6
- PIM-SSM, PIM-DM, and PIM-SM (for IPv4 and IPv6)
  - Support IP multicast address management and inhibition of DoS attacks
- MPLS support
  - Provides extended support of MPLS, including MPLS VPNs and MPLS Traffic Engineering (MPLS TE)
- Virtual Private LAN Service (VPLS)
  - Establishes point-to-multipoint L2 VPNs across a provider network
- Bidirectional Forwarding Detection (BFD)
  - Enables link connectivity monitoring; and reduces the network convergence time for RIP, OSPF, BGP, IS-IS, VRRP, MPLS, and IRF
- Policy-based routing
  - Makes routing decisions based on policies set by the network administrator
- Equal-Cost Multipath (ECMP)
  - Enables multiple equal-cost links in a routing environment to increase link redundancy and scale bandwidth
- IPv6 tunneling
  - Allows a smooth transition from IPv4 to IPv6 by encapsulating IPv6 traffic over an existing IPv4 infrastructure

**Security**

- ACLs
  - Provide IP L2-to-L4 traffic filtering; global ACLs, VLAN ACLs, port ACLs, and IPv6 ACLs are supported; up to 6,144 ingress ACLs and 1,024 egress ACLs are supported
- IEEE 802.1X
  - Defines an industry-standard method for user authentication, using an IEEE 802.1X supplicant on the client in conjunction with a RADIUS server
- MAC-based authentication
  - Authenticates the client with the RADIUS server, based on the client's MAC address
- Identity-driven security and access control
  - Per-user ACLs
    - Permit or deny user access to specific network resources, based on the user identity and time of the day—allowing multiple types of users on the same network to access specific network services without risking network security or providing unauthorized access to sensitive data
  - Automatic VLAN assignment
    - Assigns users automatically to the appropriate VLAN, based on their identities

- Port security  
Allows access only to specified MAC addresses, which can be learned or specified by the administrator
- Secure FTP  
Allows secure file transfer to and from the switch; and helps protect against unwanted file downloads or unauthorized copying of a switch configuration file
- STP BPDU port protection  
Blocks Bridge Protocol Data Units (BPDUs) on ports that do not require BPDUs, helping prevent forged BPDU attacks
- DHCP protection  
Blocks DHCP packets from unauthorized DHCP servers, helping prevent denial-of-service attacks
- DHCP snooping  
Helps ensure that DHCP clients receive IP addresses from authorized DHCP servers and maintain a list of DHCP entries for trusted ports; and helps prevent reception of fake IP addresses and reduces ARP attacks, improving security
- DHCPv6 snooping  
Helps ensure that DHCPv6 clients obtain IPv6 addresses from authorized DHCPv6 servers and record IP-to-MAC mappings of DHCPv6 clients
- Dynamic ARP protection  
Blocks ARP broadcasts from unauthorized hosts, helping prevent eavesdropping or theft of network data
- STP root guard  
Helps protect the root bridge from malicious attacks or configuration mistakes
- Guest VLAN  
Provides a browser-based environment to authenticated clients, which is similar to IEEE 802.1X
- Port isolation  
Secures and adds privacy; and helps prevent malicious attackers from obtaining user information
- Endpoint Admission Defense (EAD)  
Provides security policies to users accessing a network
- RADIUS/HWTACACS  
Eases switch management security administration by using a password authentication server
- Secure management access  
Delivers secure encryption of all access methods (CLI, GUI, or MIB) through SSHv2 and SNMPv3
- Unicast Reverse Path Forwarding (uRPF)  
Allows normal packets to be forwarded correctly, while discarding the attaching packet due to lack of a reverse path route or incorrect inbound interface; helps prevent source spoofing and distributed attacks; and supports distributed uRPF
- IP source guard  
Helps prevent IP spoofing attacks
- IPv6 source guard  
Help prevent IPv6 spoofing attacks using ND Snooping as well as DHCPv6 Snooping

- ND Snooping

Allows only packets with a legally obtained IPv6 address to pass

### **Virtual private network (VPN)**

- Generic Routing Encapsulation (GRE)

Transports L2 connectivity over an L3 path in a secured way; and enables the segregation of traffic from site to site

### **Convergence**

- LLDP-MED (Media Endpoint Discovery)

Defines a standard extension of LLDP that stores values for parameters such as QoS and VLAN to automatically configure network devices such as IP phones

- Internet Group Management Protocol (IGMP)

Utilizes Any-Source Multicast (ASM) or Source-Specific Multicast (SSM) to manage IPv4 multicast networks; and supports IGMPv1, v2, and v3

- Multicast Source Discovery Protocol (MSDP)

Allows multiple PIM-SM domains to interoperate; is used for inter-domain multicast applications

- Multicast Border Gateway Protocol (MBGP)

Allows multicast traffic to be forwarded across BGP networks and kept separate from unicast traffic

- Multicast VLAN

Allows multiple VLANs to receive the same IPv4 or IPv6 multicast traffic, lessening network bandwidth demand by reducing or helping eliminate multiple streams to each VLAN

- LLDP-CDP compatibility

Receives and recognizes CDP packets from Cisco's IP phones for seamless interoperation

### **Additional information**

- Green initiative support

Provides support for RoHS and WEEE regulations

- Green IT and power

Improves energy efficiency through the use of the latest advances in silicon development; and shuts off unused ports and utilizes variable-speed fans, reducing energy costs

### **Warranty and support**

- Limited Lifetime Warranty
