

# **Addendum to the HPE Software Enterprise Support data sheet**

## **HPE Fortify Software Security Content service**

This addendum applies to the HPE Fortify software products as outlined herein (the “addendum”) it amends and is made part of the HPE Software Enterprise Support data sheet (the “Support data sheet”), versions **4AA4-4792ENW (U.S. letter version)** and **4AA4-4792ENN (A4 version)**.

The provisions of this addendum are intended to supplement the Support data sheet for the HPE Fortify software products as further outlined in this addendum. To the extent that there is any conflict between the provisions of this addendum and the provisions of the Support data sheet, the provisions of this addendum shall control.

### **Introduction**

HPE Software Enterprise Support for Fortify is available as two options, recommended by default is HPE Software Enterprise Standard Support; it includes the HPE Fortify Software Security Content service, which will help ensure you receive the latest security intelligence for the HPE Fortify products. HPE Enterprise Support is also available without HPE Fortify Software Security Content service. Please note if you chose this option, you will not receive the content updates but only technical support. Staying current on the latest security content helps your product detect the security vulnerabilities as they are researched, discovered, and built in to the HPE Fortify offerings you purchased. Security Content service is delivered regularly throughout the year. Purchasing HPE Fortify support offerings without the security content, introduces risk to your environment. Note: If HPE Software Enterprise Support (which includes the HPE Fortify Software Security Content) is purchased after your initial order, additional fees apply.

### **HPE Fortify Software Security Content service**

The HPE Fortify Software Security Content service (“Service”) may include one or more of the following features as further defined below, based on the HPE software product purchased and are included with HPE Software Enterprise Standard Support and HPE Software Enterprise Basic Support at no additional cost.<sup>1</sup>

- HPE Fortify Secure Coding Rulepacks: HPE Fortify Secure Coding Rulepacks means rules content for use by HPE Fortify Static Code Analyzer to identify vulnerable code patterns across supported programming languages and vulnerability categories.
- HPE WebInspect SecureBase: HPE WebInspect SecureBase means rules content for use by HPE WebInspect that includes automated attack patterns for security vulnerabilities with policies that guide users in identifying critical weaknesses in Web applications and Web services under test.

<sup>1</sup> You will receive specific information about the applicable service features for the specific HPE product you purchased.

- HPE Fortify Runtime Rulepacks: HPE Fortify Runtime Rulepacks means rules content for use by HPE Fortify Runtime and HPE ArcSight Application View to extract security-related information from running applications and to protect applications against the most common application vulnerabilities.
- Premium Content: Premium Content means additional artifacts occasionally produced by HPE Software Security Research for the HPE Fortify product suite, including but not limited to reports and project templates for HPE Fortify Software Security Center, HPE WebInspect testing policies, and specialized rules content designed to address new security challenges.

## HPE Fortify software support without Security Content

HPE Software without Security Content support provides only the standard technical support options (refer to “Support data sheet”), without the entitlement to the HPE Fortify-defined Security Content. Security Content is valuable and integral to helping ensure your HPE Fortify products are up to date and ensuring the security of your purchase.
