- Adopt plans for new services, architectures, and BI technologies using analytic use cases and proof of value.
- Gain an actionable roadmap to accelerate value realisation and a clear path to business insight.

HPE Business Intelligence Modernization Strategy and Planning Services

Become data-driven

Organisations are under tremendous pressure to deliver better products and services, improve operations, manage risks, and stay relevant in the “age of the consumer.” Those organisations that unlock their data’s value will ride the next wave of innovation and become data-driven and agile.

To do this, better management of data is required to support the ever-changing information and technology landscape. Whilst traditional business intelligence (BI) focuses on performance reporting—and historical analysis is still important—the explosion of new data formats has created a new business imperative. For organisations to embrace Big Data

architectures, more advanced, real-time analytics are needed to remain competitive and achieve business outcomes.

To strike an advantage, organisations must modernise their BI environments to harness and act on all relevant data. With legacy BI environments falling short of expectations and projected returns on investments, increased data security concerns, new demands for real-time insights, and a wide range of services and technologies to choose from, developing a comprehensive strategy and actionable plan can be overwhelming.

Through years of experience, HPE Analytics and Data Management Services consultants understand this complexity and know that to become data-driven and agile, you

Offering overview

require a proven, accelerated strategy and roadmap aligned to business objectives that incorporate:

- A clear path to business insights and value from existing and newly emerging data sources and types
- Rapid exploration and deployment of analytic use case scenarios with predictable investments
- Automated, software-enabled assessment of existing database systems to evaluate performance and identify workload optimisation opportunities
- New services, architectures, and technologies—adopted to address capability gaps
- An opportunity to leverage alternative, low-risk, and secure data and analytics delivery platforms—cloud, hosted, and as-a-Service
- Best practices, thought leadership, and direction for information management and data governance

Make data work for you

Hewlett Packard Enterprise delivers insightful BI consulting engagements that help organisations like yours become more agile and data-driven through the development of comprehensive BI strategies and actionable implementation plans, as well as the delivery of data insights through rapid data discovery.

Our Business Intelligence Modernization Strategy and Planning Services enable you to discover, design, develop, and execute on a strategic roadmap that modernises your BI, analytics, and data management

capabilities for improved outcomes.

With a proven, robust methodology, our experienced consultants offer a guided approach to accelerate development of both long- and short-term vision and quick-win implementation plans that drive continuous improvements and business value. We will help you break through internal roadblocks to quickly discover the business value within your data, including:

- Accelerated implementation of solutions based on business-value priorities, technology capabilities, and organisational readiness
- Key business challenges and information processing issues prioritised and addressed through modernisation
- Current IT investments optimised, capability gaps exposed, and detailed plans designed to adopt new services, architectures, and technologies to achieve desired business outcomes
- Best practices and expertise of experienced consultants shared across business and technical domains

Get transformation at your fingertips

We deliver a comprehensive BI, analytics, and data management modernisation strategy and plan that aligns with your organisation's objectives to meet current and emerging business demands. Working with HPE,
