

Gain insight; keep your business up and running

HPE Continuity Services Workshop

Without continuity planning, business stops when there's a disruption. The question is: how to plan well to keep it going? Participate in the HPE Continuity Services Workshop—we have some ideas to share.

Insights

- Take part in the HPE Continuity Workshop; our proven approach stimulates and facilitates discussion.
- Clarify business drivers and benefits for implementing the right level of continuity.
- Get results, including a workshop report that outlines findings and recommended next steps.

Safeguard your business

If your business is like most, evolving to a digital business model, success depends heavily on the continuous operation of your IT-supported business processes. Interruption of any kind can affect your organisation's costs, and also its revenue, customer retention, corporate reputation, and stock price—to name a few.

Continuity planning is a vital and sometimes compulsory component of safeguarding your business and protecting your stakeholders and customers. Yet organisations often struggle to balance the costs of continuity with the speed of recovery and level of confidence required.

Many consider their current strategies as too expensive, not in line with business requirements, or question whether their plans would actually work should they ever be tested in a real situation. Hewlett Packard Enterprise (HPE) cloud-based recovery services

provide rapid recovery at price points previously associated with solutions taking several days. Now is the time to look again and see how HPE can help you achieve the levels of continuity confidence you need within the world of flat or shrinking budgets.

Attend and build steps

The HPE Continuity Services Workshop is a facilitated interactive session that will help you define your roadmap and transform your continuity preparations. Using our proven workshop approach, you will establish a way forward for implementing an acceptable level of continuity readiness your business expects—in the most cost-effective way—whilst taking into account the latest industry solutions.

Through knowledge sharing and an interactive discussion, a tangible set of next steps will be developed, based on your specific business drivers, continuity objectives, and current continuity maturity level.

Get the help you need

With the HPE Continuity Workshop, you will get help:

- Clarifying business drivers and benefits for implementing the right level of continuity.
- Identifying areas where performance improvements or cost savings may be made.
- Gaining consensus and buy-in for transformation activities.
- Improving progress and confidence in your continuity solutions.

Know the details

- Workshop is half- to one-day long.
- Its proven approach combines printed panels and presentation to stimulate and facilitate discussion.
- Every session uses whiteboard panels to collect and organise your input.
- A central roadmap panel defines next steps and timelines.
- Workshop targets C-level and senior business and IT management audiences.
- Every session is business and/or IT service continuity focused.
- It provides a more in-depth investigation, which may build on a previous HPE Continuity Services client briefing session.

Move forward

As follow-up to the HPE Continuity Services Workshop, you will receive a workshop report, outlining findings and recommended next steps.
