HPE As a Service Solution for SAP HANA— Proof of concept

Evaluate HPE As a Service Solution for SAP HANA in a real production environment, using your applications and data. Our short-term, no-obligation trial lets you assess the value SAP HANA brings to your organization.

Data's exploding—resulting from a surge in social media and mobile technologies. The volume, velocity, and variety of information is overwhelming. But consider the potential valuable intelligence within it.

Use SAP HANA the simple way

Start your journey as a real-time enterprise with our proof of concept (POC) for HPE As a Service Solution for SAP HANA®. With real-time information, your enterprise can enhance the customer experience, strengthen your competitive advantage, uncover new opportunities for growth, and seize opportunities. That's the potential SAP HANA brings. And since SAP is moving its products to SAP S/4HANA, now it's time to prepare your organization for this new, real-time world.

Getting your project under way is daunting given scarce talent and capital funds. Let us help. With HPE As a Service Solution for SAP HANA POC, we deploy and manage SAP HANA, and you only pay for what you use.

Give it a try

Even as promising opportunities are identified, moving to a new enterprise platform is a significant commitment for organizations. That's why we're offering a no-obligation trial to HPE As a Service Solution for SAP HANA running on HPE Enterprise Cloud Services.

Through our structured program, you can experience a short-term POC, with access to preconfigured SAP HANA appliances. Trying SAP HANA within a production-like environment enables you to evaluate capabilities, experience features, and determine the impact to business processes and IT systems.

Benefit from SAP HANA enterprise servers

Our POC program uses enterprise-grade servers, engineered for the most demanding SAP HANA environments. We manage the infrastructure with our best-in-class tools, hardware, software, automation, operational processes, and highly skilled talent. And the servers we use to power HPE As a Service Solution for SAP HANA are the same ones we use in our POC. This is the most robust solution for your SAP HANA needs—worldwide.

- Media and entertainment

Available to any industry and any size organization

Through our POC program, we've hosted a wide range of clients, from Fortune 500 companies to small and mid-sized businesses. The industries we serve demonstrates the versatility of HPE As a Service Solution for SAP HANA and its related services.

Engage in a valuable trial

With HPE As a Service Solution POC, you try the production services you would receive in a long-term commitment, without obligation after the trial concludes. Our POC for SAP HANA is a fully featured, logically dedicated cloud environment with an SAP HANA infrastructure.

The program runs from 4 to 16 weeks. You get an assigned, dedicated cloud compartment in an HPE cloud-enabled data center—specifically used for our POC program. This compartment is a logically isolated network configuration with a sophisticated firewall, VLAN, and network security technology.

Receive dedicated access

Working with your cloud client services engineer, you'll start your trial period. Throughout the process, your engineer helps with any technical support issues or guidance as required.

Cloud delivery is generally self-service. We'll train your IT staff to use the portal, giving you quick access to your orders and service catalog. That way you can include your experience at accessing our enterprise services portal as part of your evaluation.

Access a comprehensive capability set

With this program, you get everything you need to run SAP HANA-based applications in the cloud—without making capital investments. This includes our expertise in system integration and operational excellence to make cloud-based, SAP HANA services available for your core business workloads—24x7.

Our security expertise and service excellence extend beyond the trial. After your POC concludes, HPE protects your data by closing down all user accounts and wiping all storage media and backups.

After finishing your POC evaluation, you can commit to a longer-term engagement by simply letting your account team know. We then work together to create a permanent data center space, set up processes and resources, and discuss the benefits of moving to a production environment with HPE As a Service Solution for SAP HANA. Or, we can explore other HPE services and solutions for deploying, managing, and running SAP HANA.

Work with a leader
