

Delivering IT as a Service

TierPoint's robust, cost-effective managed cloud services powered by HPE

National footprint

We have 39 data centers across the U.S. with multi-tenant cloud pods in 16 of these facilities, all interconnected by TierPoint network.

TierPoint advantage

Expert attention

TierPoint professionals focus on infrastructure management so you can focus on your business.

End-to-end services

Ongoing one-to-one service enables TierPoint to anticipate and meet your needs.

24x7 NOC teams

Critical support remains available when you need it most.

Smart solutions

Based on your objectives, TierPoint Cloud Services experts design and implement Hybrid IT solutions that meet both technical requirements and budgets.

Off-load the routine

Need to free up your IT resources to focus on your business-critical systems and development? Let the highly skilled TierPoint engineers supplement your IT department by caring for some of the routine tasks.

Move your routine IT activities to affordable cloud services, and reduce the costs and burdens of owning the underlying technology.

TierPoint Cloud Services provide access to cloud hosting environments overseen by our dedicated, certified operational staff and engineers—providing one of the industry's most robust cloud computing and data storage solutions.

All of our services are built on top of our foundational Hybrid IT capabilities (cloud, managed services, colocation). This unique structure allows us to better customize our solutions based on your specific needs.

Pay for precisely what you need

Instead of purchasing, operating, and maintaining racks full of servers and associated hardware, you contract for precisely the processing and storage services your business requires.

- Reduce up-front capital expenditures on hardware.
- Avoid ongoing operating expense on maintenance of equipment.
- Pay for what you use today, with the ability to scale your services as your needs change.
- Convert processing, data storage, networking, and security capital costs to operating expenses.
- Get cost-effective data retention by supplementing your other storage systems.

Contract with TierPoint for the cloud solution you need and pay only for the resources you consume, rather than purchasing oversized systems and services you may need in the future.

Proven partnership of industry leaders you can trust

TierPoint Cloud Services are powered by Hewlett Packard Enterprise server technology and deployed in advanced, state-of-the-art data centers throughout the U.S.

As an HPE Gold Partner, TierPoint offers unparalleled choices for running your business securely and cost-effectively in the cloud, including:

- Adaptable HPE cloud-based server infrastructure and HPE 3PAR storage options
- Automated backup, continuity, and business recovery service
- Application-specific hosting for mission-critical applications

Your solution benefits

• Accelerate time to market

- Deploy capacity and lessen the need to set up new hardware prior to launching services.

• Enhance flexibility

- Pull resources from allocations that readily accommodate seasonal spikes.

• Increase efficiency and availability of IT resources and applications

- Take advantage of highly reliable services and dedicated system management.

- Consolidate, standardize, and unify platforms, and automate infrastructure on cloud-based HPE systems.

• Improve application infrastructure

- Secure a 99.99 percent, 99.9 percent SLA for highly available, dedicated private cloud environments running on HPE.

Getting started

Get started today with market-proven IT as a Service (ITaaS) solutions delivered by TierPoint and HPE. Call your sales representative and get the details you need to accelerate your business.
