Claim Substantiation

Claim HPE ProLiant Gen9 servers deliver up to 25% faster performance (due to Intel E5-2600v4 chip).

Substantiation: TPC-H results show the HPE ProLiant DL380 Gen9 Server with a non-clustered result of 678,492 QphH @1000 GB and \$0.64/USD QphH @ 1000GB with system availability as of July 13, 2016; see tpc.org/3320. The TPC believes that comparisons of TPC-H results published with different scale factors are misleading and discourages such comparisons. Results as of 31 March, 2016; see tpc.org for more information. Performance gains may vary.
