

# Discover and update asset locations and databases

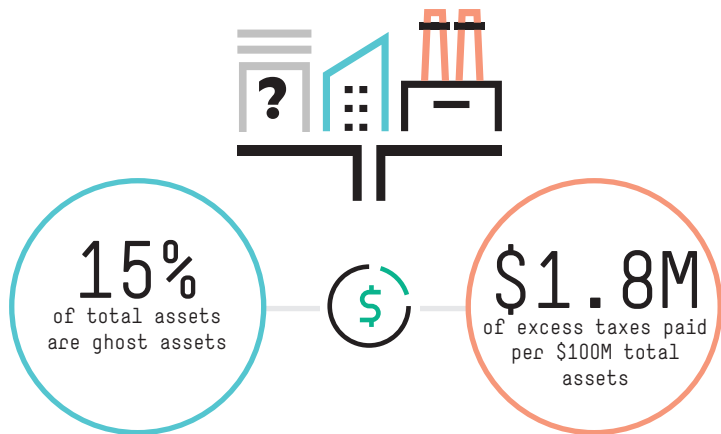

It's not uncommon for there to be between a thirty to fifty percent gap in what a business believes they have for assets versus what they really have, resulting in difficulty when trying to sell assets with missing information, or when trying to estimate the facility or infrastructure's value. Gaps can also pose significant risks in terms of being able to maintain government and facility operational compliance. And then there's the issue with taxes. Many companies are paying upwards of 1.8% of the total asset value for ghost assets—those assets that are on the books but no longer exist. Hewlett Packard Enterprise, Visual Globe and CB Technologies combine field data capture, geospatial visualization capabilities and deep learning analytics to find continuity and consistency in assets leading to higher productivity, compliance and cost control.

## Close the gaps

Assets by definition hold value. That is, until an asset is not properly accounted for or when assets that no longer exist remain on the books. The value that you should be able to realize turns into liabilities in terms of compliance, valuations, and excess taxes; often costing the company hundreds of thousands of dollars a year, if not more. Perform a gap analysis using a centralized asset management system to improve your productivity, compliance and costs.

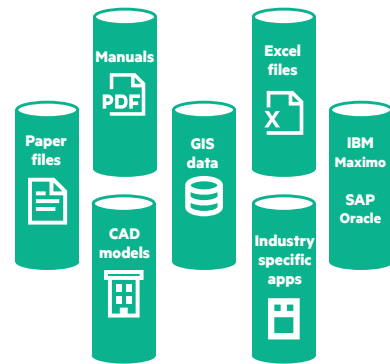

## Paying excess taxes for ghost assets?

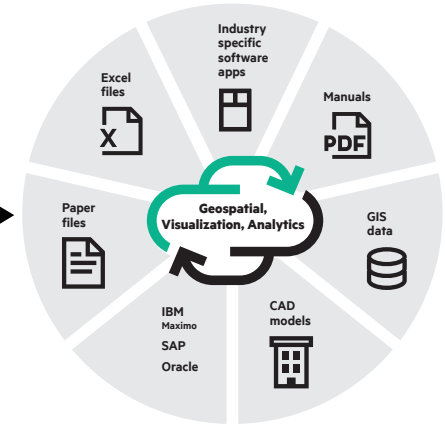

## Current state

Data related to assets are disorganized, not in an easy-to-search form, often trapped in silos, and geographically dispersed.

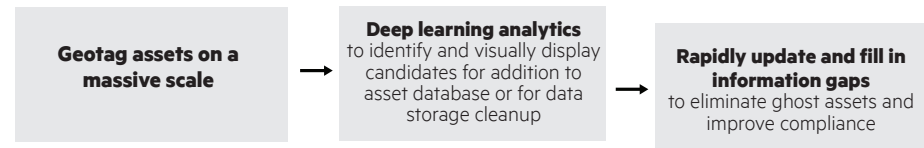

## Desired state

Enable access to ALL relevant asset information when and where needed.

## Solution through collaboration

Gain a detailed overview of your company's assets and their locations using a combination of modern field data collection, data fusion, geospatial visualization tools and deep learning analytics. This collaboration from HPE, Visual Globe and CB Technologies enables you to lower costs, and improve productivity and compliance.

## What's next
