

Adopt Technology Faster

Configuration, Deployment, and Integration Services

- Adopt new technology faster
- Deploy and expand easily
- Transition without disrupting operations
- Reduce risk, cost, and frustration

Helping deploy and expand easily and rapidly

If you have a large-scale deployment, need equipment rolled out to meet a customized schedule, with branch and multiple locations, then Configuration, Deployment, Integration Service (CDIS) can tailor solutions to meet your needs.

HPE CDIS can rapidly and cost-effectively get your infrastructure up and running at peak performance, enabling you to quickly move to production, and realize a return on your investment. HPE Configuration, Deployment, and Installation Services (CDIS) gives you a single, comprehensive framework, including the solution preconfigured in the HPE's facilities, then deployment and installation wherever you need the systems deployed, whether it be in one location or multiple locations, all your implementation is managed end to end. You can be confident that the solution and deployment is exactly what you envisioned.

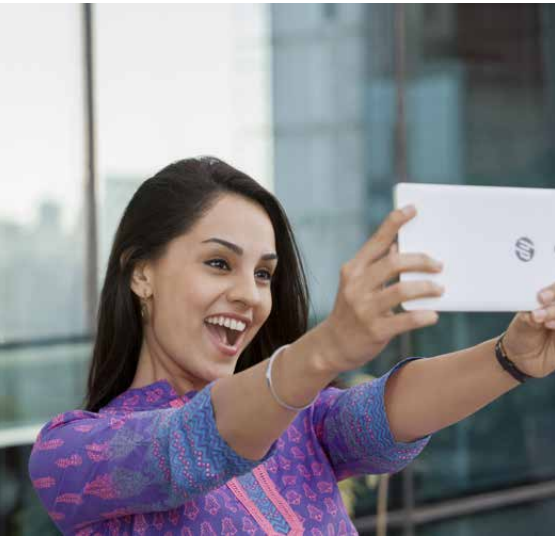

An end-to-end service to help drive business results

Project management: Coordinating engagements of multiple vendors you may have contracted for seamless deployment of your solution.

Configuration includes options like: Staging and configuration, imaging, warehousing, and asset tagging, dependent on your needs.

Deployment: Installation for hardware and software configuration of your infrastructure, delivering it ready to be integrated.

Managed logistics: Your project manager coordinates the timing between shipping and deployment locally or globally, delivering a prestaged solution according to the defined plan.

Optional services

Asset disposition: Meeting compliance with the most-stringent asset disposition regulations: removal, recycling, and remarketing old products.

Project portal: Gives you a cloud-based portal with: an executive dashboard, document repository, reporting tailored to your specific needs, single point of reference for real-time end-to-end tracking of the project, and can be accessed from any device at any time.

Customer benefits

Save time and save money: Have fast, smooth adoption of latest products and technologies by using HPE CDIS and leveraging HPE's project management expertise. Hewlett Packard Enterprise also saves you time by offering single point accountability.

Improve your IT efficiency: Hewlett Packard Enterprise can fully manage the implementation of an organization's new technologies, so your key IT personnel can focus on driving business innovation, growth, and staying competitive in today's market place.

Control risk and cost: Hewlett Packard Enterprise helps to reduce risk and cost in many ways with: deployment while the products are still at the HPE facility on HPE factory shop floor. HPE manages correct racking, installing, and tagging to have proper, hassle-free onsite management. HPE sanitizes and disposes your assets as per the compliance and regulations to avoid any data privacy issue.

Why Hewlett Packard Enterprise

Expertise: Experienced, subject matter experts for a range of Hewlett Packard Enterprise and multivendor technology.

Worldwide presence: A global delivery organization with consistent delivery capability that can be tailored to customer's needs in more than 170 countries.

Turnkey solutions: Preconfigured, pretested, and preintegrated solutions from HPE facilities.

Leverage HPE technology and expertise, along with longtime field experience, to make sure your solution is deployed smoothly, in the exact manner you require, and without business disruption.
