

Detect, prevent, and manage cyber-security incidents

Incident Response and Breach Recovery

Protect

Protect your business from reputational damage and financial and data loss through cyber-security risk management

Insights

- Rapid identification reduces incident risk
- Prompt and effective action minimizes loss and damage
- Effective preparation cuts remediation cost

Learn what it takes to protect your business

Understanding the risk of a cyber-attack on your business, personal, financial, and proprietary data is critical—most organizations will suffer at least eight security incidents each week.¹

Organizations find it especially hard to detect and deal with attacks caused by insiders—let alone prevent them. And it can take a long time to sort out—an average of 58 days.²

Dealing with the aftermath of incidents can be even more problematic; few organizations have the forensic skills to understand and manage the consequent legal and regulatory issues.

To help detect and prevent attacks, your business must collect security data from firewalls, intrusion prevention systems, and antivirus systems, among others. But are you using that data to produce information that can reduce your risk of cyber-security incidents?

Stay ahead of the curve; act promptly

With HPE Security Intelligence and Incident Response—consisting of consultancy-led services—you get help detecting, preventing, and managing risk from cyber-security incidents. These features include Security Information and Event Management (SIEM); Security Incident Response; Advanced Threat Protection from Hewlett Packard Enterprise and FireEye/Mandiant; Digital Forensics and e-Discovery; and Data Recovery and Secure Disposal.

Get capable, proactive management

Make sense of your security data by fully integrating your existing security systems and interfacing with functions and processes such as help desks and network operations centers using HPE Security Information and Event Management.

Our experienced consultants design and tune the solution to remove false alarms, capture incidents, and integrate with other systems to generate reports. They also conduct health checks on any existing SIEM solutions and recommend improvements and upgrades where needed.

Get 24x7 response, globally

With HPE Security Incident Response Service, you get global response teams, available round the clock, and our three forensic response centers—in the U.S., the UK, and Bulgaria. Our Global Security Operations Center provides 24x7 facilities for incident reporting and analysis.

Once your incident has been triaged, it's handed off immediately to our Global Security Incident Response Team (GSIRT). With GSIRT, you get assistance resolving your incident and performing detailed forensic reporting, documenting causes, and lessons learned.

²“Global report on the cost of cyber crime,” Ponemon Institute, 2014.

Gain advanced threat defense

Get unparalleled access to technology and services that help you identify and prevent advanced threats and targeted attacks on your networks with Advanced Threat Protection from Hewlett Packard Enterprise and FireEye/Mandiant. Our services reduce damage from advanced threats and targeted attacks, minimize downtime, and enable you to prepare for better responses in the future.

Reduce your business risk. Analyze global threats and vulnerabilities, derive meaningful intelligence, and take appropriate action—all with our support.

And get help minimizing your financial and data loss, and reducing damage to your reputation. We provide digital forensic assistance to help you meet the legal and regulatory requirements following security incidents.

Engage forensic expertise

Digital Forensics and e-Disclosure services use industry-standard models to identify data and data owners, keep relevant data in a legally acceptable way, collect and process it in the correct formats, and review it for relevance to the legal process. We also work with you to present it clearly to stakeholders. And we do all this with minimum disruption to your business.

Work with an experienced leader

With Hewlett Packard Enterprise, you get:

- Global threat and vulnerability knowledge from our 10 security operations centers: dealing with 23 billion security events a month, and securing 90,000 devices for 47 million users
- World leadership in threat and vulnerability research and analysis
- Implementation of leading technologies, delivering actionable intelligence
- Expert teams available 24x7, delivering incident response, forensic advice and assistance, SIEM expertise tailored to your needs
- Global availability, state-of-the-art forensic laboratories, and testing facilities

Reduce your risk

You need to reduce your organization's risk, and possible damage to your reputation, from cyber-security attacks. Experts can help establish effective and cost-efficient systems and processes for preventing, detecting, and managing security incidents, and dealing with the aftermath of those incidents.

Improve the cost-effectiveness of your security incident detection, prevention, and management with HPE Security Intelligence and Incident Response. Our industry-recognized expertise, skills, and experience give you advice and assistance with, and implementation of, solutions appropriate to you.
