

# Video Instructor Self Paced eLearning (VISPEL)

Hewlett Packard Enterprise Education Services [US/Canada]

Video Instructor Self Paced eLearning (VISPEL) from HPE Education Services offers a unique training delivery format—combining the affordability and convenience of self-paced eLearning with the expertise of an instructor to closely simulate the classroom experience. What makes VISPEL unique from other self-paced training options? VISPEL embeds video of the instructor delivering the course content into the slide presentation. The instructor, a subject matter expert, does much more than just hit the bullet points. He elaborates, adds content and provides a much richer learning experience. It's as close to being in a 'live' classroom as one can get.

## What our customers are saying...

"We saved over \$1M compared to our ITIL V2 Foundations training approach. The online training works well for busy employees who find it hard to give up entire days. The content is very well done and all of our employees are getting consistent training that doesn't vary from instructor to instructor."

*-Ilene Jones,  
Process Architect  
The Boeing Company*

"The suggestion to deliver the training in an online self-paced format has enabled us to train an entire organization that would not have received the training in a timely manner otherwise. The reports that are provided as part of the program enable the IRS to stay on top of students who might get sidetracked due to project or personal commitments"

*-Teresa Stamm  
HR Specialist  
US IRS*

## Video Instructor Self Paced eLearning (VISPEL)

### Benefits

- **Flexibility.** Students take training at their own pace. Flexible licensing options offer access for up to one year.—plus, there are options to extend access.
- **Mobility.** Training can be accessed from any approved tablet or smartphone device that has a connection to the Internet. Contact HPE Education Services for a list of approved devices.
- **Value.** VISPEL provides an incredible amount of training content at a very affordable price. For example, the traditional classroom equivalent of the training in the HPE Best Practice Library would cost around \$45,000. VISPEL provides the same training content for \$1,995.

### Features

- **Expert instruction.** Our certified instructors possess real world experience and a superior understanding of the subject matter in their fields. They have the ability to convey knowledge in an effective, engaging and professional manner to a wide audience.
- **PowerPoint slides and visuals.** We use PowerPoint slides to illustrate concepts and complement the expert instruction. Slides include embedded video of the instructor, a subject matter expert. This approach provides students with a clear, efficient and complete presentation of concepts.
- **Immersive demonstrations.** Immersive demonstrations illustrate practical application of concepts in real-world environments.
- **Controls and navigation.** Easy to use controls and table of contents navigation allow students to jump quickly to any point in the course and fully control the pace of training. Our Learning Portal provides convenient access to all VISPEL resources—including a gateway to exam websites to simplify exam registration and payment.
- **Student workbooks.** VISPEL courses feature printable Student Workbooks for every chapter. Workbooks can also be used electronically to quickly review slides and training topics.
- **Review quiz.** Once a topic is completed, our built-in review quiz allows students to assess progress and identify areas where additional study may be required.

# HPE Learning Libraries

VISPEL training courses are generally packaged into a series of Learning Libraries to provide in-depth instruction on specific topics. Our popular ITIL Foundation course is sold on a standalone basis and can be ordered **online**.

Libraries include:

- **HPE Best Practices** 25+ classes covering a wide range of IT service management, project management and business analysis topics.
- **HPE Security Library**. Classes include Certified Ethical Hacker, Security+ with labs, CISSP and 10 others.
- **HPE Office Productivity Library**. Classes include software application training on Microsoft, Adobe, and HTML Development...over 50 classes in all.
- **HPE Technology Training Library**. Classes about managing and configuring technology components.

Check out the specific courses in each Learning Library below and on the pages that follow:

## HPE Best Practice Library
