Why HPE Education Services?

- IDC MarketScape leader 4 years running for IT education and training*
- Recognized by IDC for leading with global coverage, unmatched technical expertise, and targeted education consulting services*
- Key partnerships with industry leaders OpenStack®, VMware®, Linux®, Microsoft®, ITIL, PMI, CSA, and (ISC)²
- Complete continuum of training delivery options—self-paced eLearning, custom education consulting, traditional classroom, video on-demand instruction, live virtual instructor-led with hands-on lab, dedicated onsite training
- Simplified purchase option with HPE Training Credits

This course introduces network professionals to the basic features of modern networks such as VLANs, redundancy technologies such as MSTP, IRF, link aggregation technologies like LACP, static IP routing, and dynamic routing with OSPF.

In this course, participants will learn how these technologies are implemented in the HPE Comware 7 switch platform, and will have opportunities to practice configuring these features, monitor their functionality, and design a solution based on provided criteria. This course also includes an introduction to network management with HPE's Intelligent Management Center (IMC) version 7.

This course is approximately 40 percent lecture and learning activities and 60 percent hands-on lab activities.

Audience

This course is intended for IT professionals who will deploy and manage networks based on HPE Comware products.

Prerequisites

Students should possess experience with networking and common LAN protocols.

Course objectives

- Describe how HPE's FlexNetwork strategy applies to components such as FlexCampus, FlexBranch, FlexManagement, and Software-Defined Networks (SDN)
- Protect devices with local and remote authentication using Telnet, SSH, Web, and SNMP access
- Navigate the HPE Comware CLI and manage the flash file system

Course data sheet

- Upgrade the Comware switch operating system
- Configure VLANs on HPE Comware switches
- Implement basic routing on directly connected VLANs or links
- Configure a Comware switch for DHCP server and DHCP relay
- Interpret Comware logs
- Understand how different varieties of spanning tree are implemented on Comware switches
- Configure multiple spanning tree and apply STP security features
- Differentiate between static and dynamic link aggregation
- Configure and troubleshoot link aggregation on HPE switches
- Identify applications for static and dynamic routing
- Configure single-area OSPF routing
- Understand the basic operation of HPE's Intelligent Resilient Framework (IRF)
- Identify IRF's advantages when compared with other technologies that manage redundant paths
- Describe how the Multi-Active Detection (MAD) protocol deals with an IRF spit stack
- Configure and verify a simple IRF topology
- Identify the components and protocols that support HPE's Intelligent Management Center
- Install IMC and use it to configure and monitor network devices
- Differentiate applications for two- and three-tier network designs
- Identify an appropriate VLAN design based on a given scenario
- Based on a given scenario, choose appropriate link types and redundancy solutions
- Use best practices for IP addressing and OSPF routing when implementing a network design
