HP course # H6C66S

Category Big Data

Duration 1 hour

Course description

If you want answers to the above questions, come and hear how HP spans the full gamut of solutions in the Big Data space. To help organizations reap the rewards of big data, HP announced HAVEn, a big data analytics platform, which leverages HP's analytics software, hardware and services to create the next generation of big data-ready analytics applications and solutions.

Big Data promises big benefits, but also poses a big challenge. However and wherever you need help in building a Big Data solution - be it infrastructure, analytics, and/or services - HP is there, providing a full spectrum of capabilities. This seminar will show how HP can help you realize success in your Big Data journey.

Audience

- Any customers or partners interested in Big Data technology overview and offerings from HP
- Anyone interested in learning how to unleash the power of Big Data and improve their company's understanding of customer's needs

Prerequisites

- IT professionals or IT management background

Course objectives

- Big Data enables organizations to take advantage of the totality of their information-both internal and external-in real time. It produces extremely fast decision making, resulting in unique and innovative ways to serve customers and society. This seminar will help you understand the Big Data ecosystem and the questions you need to know to ask when assessing any Big Data services vendor
- Show how HP can help clients start their journey to Big Data

Benefits to you

- Start your Big Data journey on the right path
