

# DevOps Awareness H9P61S

This 1-day course introduces the fundamentals of DevOps. It explains the key concepts that underpin DevOps and helps attendees to understand the benefits that a DevOps approach could have for their own organizations, and potential problems that should be addressed. The course includes discussion of people, process and technology aspects of DevOps, and provides practical suggestions of steps that attendees can take to start introducing DevOps.

## DevOps Awareness

**Price** USD \$695

**HP course #** H9P61S

**Category** ITIL

**Duration** 1 day

## Audience

- Senior IT management, IT development staff, IT operations staff, IT process owners, business managers, business process owners
- Individuals who require an understanding of DevOps and how it can contribute to the success of IT within an organization
- IT professionals who are working in an organization that has adopted DevOps and need to be informed about DevOps so that they can operate effectively within the organization

## Prerequisites

- There are no specific pre-requisites for this training, but knowledge and experience of how an IT organization works would be helpful

## Course objectives

On successful completion of this course, candidates can expect to gain knowledge of:

- Issues around organizational separation of IT development and IT operations, and how these can have a negative impact on both IT and the business
- The benefits of a DevOps approach to both IT and the business
- How DevOps builds on existing concepts and approaches such as ITIL®, Agile and Kanban
- The role of continual integration, continual testing and continual deployment in DevOps
- Organizational issues relating to DevOps, and understanding of options for DevOps organizational design

- The role that tools play in DevOps
- Possible approaches to get started on a DevOps journey

## **Benefits to you**

- Understand how DevOps can create increased value for both IT and the business
- Learn how to build your own DevOps solution by integrating a wide range of concepts and approaches
- Understand the importance of people, processes and technology in creating an effective value driven approach to the lifecycle of IT and IT services
- Learn how different parts of the IT organization can work more effectively together

## **Course outline**

### **What problem are we trying to solve?**

- Understand why we need to consider moving from traditional IT organizational silos to a DevOps culture

### **Overview of traditional change and release management**

- Understand the role of change and release management in protecting IT and the business from the negative impact of change, and recognize some potential weaknesses with the way these are traditionally implemented

### **Overview of DevOps and related concepts**

- Learn about a wide range of concepts that can contribute to DevOps, including application lifecycle management (ALM), Agile, Lean, Kanban, continual integration, continual testing, continual deployment, and infrastructure as code

### **DevOps as people, process and technology**

- Understand that DevOps combines aspects of people and organization, process design and integration, and tools and technology. Gain insights into how these must work together to enable value creation

### **What benefits can DevOps deliver?**

- Consider the benefits that DevOps can deliver to the business, as well as to the IT organization, and start to think about how this could justify the adoption of DevOps within your own organization

### **Potential issues with DevOps**

- Learn about some of the potential issues that can make adoption of DevOps problematic, and gain some insight into how these could be addressed

### **Why just Dev and Ops?**

- Gain insight into the wide range of stakeholders that must be part of a DevOps solution, beyond just IT development and IT operations

### **Bi-modal, tri-modal, multi-modal IT**

- Consider how DevOps could be introduced into an organization without causing disruption to existing legacy systems

**How to get started on a DevOps journey**

- Consider the first steps you need to take if you want to introduce DevOps to an existing IT organization
