Why HPE Education Services?

- IDC MarketScape leader 4 years running for IT education and training*
- Recognized by IDC for leading with global coverage, unmatched technical expertise, and targeted education consulting services*
- Key partnerships with industry leaders OpenStack®, VMware®, Linux®, Microsoft®, ITIL, PMI, CSA, and (ISC)2
- Complete continuum of training delivery options—self-paced eLearning, custom education consulting, traditional classroom, video on-demand instruction, live virtual instructor-led with hands-on lab, dedicated onsite training
- Simplified purchase option with HPE Training Credits

Linux containers are changing the way companies think about service development and deployment. Containers play a vital role in the modern data-center, and Docker is leading the way. This course covers all the core features of Docker including: container creation and management, interacting with Docker hub, using Dockerfile to create and manage custom images, advanced Docker networking (how to safely expose container services to the world, and link containers), the use of Docker volumes to manage persistent data, and Docker Compose to build multi-container applications. Emphasis is placed on best practices and how to secure Docker installations and containers. The course culminates with comprehensive labs where students use Docker, Git, and a continuous integration server to automate the testing of containerized applications.

Many large companies are moving an increasing number of applications to run inside containers. Containers can provide a high level of security while also making maximal use of hardware allowing higher density than traditional VMs. Docker is a dominant force in Linux containers and the core building block for nearly all higher level container management systems. This training will get sysadmins proficient with Docker so that they can immediately be productive as organizations continue to move applications onto containers.

Prerequisites

Proficiency with the Linux CLI. A broad understanding of Linux system administration.

Supported Distributions

- Red Hat Enterprise Linux 7
- Ubuntu 16.04 LTS

Detailed Course Outline

Module 1: Container Technology Overview	<ul style="list-style-type: none"> • Application Management Landscape • Application Isolation • Resource Measurement and Control • Container Security • Container Security • Open Container Initiative 	<ul style="list-style-type: none"> • Docker Ecosystem • Docker Ecosystem (cont.) <p>Lab Tasks</p> <ul style="list-style-type: none"> • Container Concepts runC • Container Concepts Systemd
Module 2: Installing Docker	<ul style="list-style-type: none"> • Installing Docker • Docker Architecture • Starting the Docker Daemon • Docker Daemon Configuration • Docker Control Socket • Enabling TLS for Docker 	<ul style="list-style-type: none"> • Validating Docker Install <p>Lab Tasks</p> <ul style="list-style-type: none"> • Installing Docker • Install Docker via Docker Machine • Protecting Docker with TLS
Module 3: Managing Containers	<ul style="list-style-type: none"> • Creating a New Container • Listing Containers • Viewing Container Operational Details • Running Commands in an Existing Container • Interacting with a Running Container • Stopping, Starting, and Removing Containers 	<ul style="list-style-type: none"> • Copying files in/out of Containers • Inspecting and Updating Containers <p>Lab Tasks</p> <ul style="list-style-type: none"> • Managing Containers • Configure a docker container to start at boot.
Module 4: Managing Images	<ul style="list-style-type: none"> • Docker Images • Listing and Removing Images • Searching for Images • Downloading Images • Committing Changes • Uploading Images 	<ul style="list-style-type: none"> • Export/Import Images • Save/Load Images <p>Lab Tasks</p> <ul style="list-style-type: none"> • Docker Images • Docker Platform Images
Module 5: Creating Images with Dockerfile	<ul style="list-style-type: none"> • Dockerfile • Caching • docker image build • Dockerfile Instructions • ENV and WORKDIR • Running Commands 	<ul style="list-style-type: none"> • Getting Files into the Image • Defining Container Executable • Best Practices <p>Lab Tasks</p> <ul style="list-style-type: none"> • Dockerfile Fundamentals
Module 6: Docker Volumes	<ul style="list-style-type: none"> • Volume Concepts • Creating and Using Internal Volumes • Creating and Using External Volumes • Managing Volumes (cont.) • Changing Data in Volumes • Removing Volumes 	<ul style="list-style-type: none"> • Backing up Volumes • SELinux Considerations • Mapping Devices <p>Lab Tasks</p> <ul style="list-style-type: none"> • Docker Volumes

Module 7: Docker Compose/Swarm

- Concepts
 - Compose CLI
 - Defining a Service Set
 - Docker Swarm Proxy (Legacy)
 - Docker Engine Swarm Mode (Modern)
 - Creating a Swarm
- Creating Services
- Lab Tasks**
- Docker Compose
 - Docker Swarm Proxy
 - Docker Engine Swarm Mode

Module 8: Docker Networking

- Overview
 - Data-Link Layer Details
 - Network Layer Details
 - Hostnames and DNS
 - Service Reachability
 - Container to Container Communication
 - Container to Container: Links
 - Container to Container: Private Network
 - Managing Private Networks
- Remote Host to Container
 - Multi-host Networks with Overlay Driver
- Lab Tasks**
- Docker Networking
 - Exposing Ports
 - Docker Links
 - Docker Networking
 - Multi-host Networks

Appendix A: Docker Registry

- Lab Tasks**
- Docker Registry
- Docker Registry (secured)
 - Docker Content Trust

Appendix B: Continuous Integration with GitLab, GitLab CI, and Docker

- Lab Tasks**
- GitLab and GitLab CI Setup
- Unit and Functional Tests
