

Docker HODS3S

Linux containers are changing the way companies think about service development and deployment. Containers play a vital role in the modern data-center, and Docker is leading the way. This course covers all the core features of Docker including: container creation and management, interacting with Docker hub, using Dockerfile to create and manage custom images, advanced Docker networking (how to safely expose container services to the world, and link containers), the use of Docker volumes to manage persistent data, and Docker Compose to build multi-container applications. Emphasis is placed on best practices and how to secure Docker installations and containers. The course culminates with comprehensive labs where students use Docker, Git, and a continuous integration server to automate the testing of containerized applications.

HPE course # HODS3S

Category Cloud

Duration 3 days

Prerequisites

- Proficiency with the Linux CLI. A broad understanding of Linux system administration.

Course outline

Container Technology Overview

- Application Management Landscape
- Application Isolation
- Resource Measurement and Control
- Container Security
- Open Container Initiative
- Docker Ecosystem
- Lab Tasks
 - Container Concepts runC
 - Container Concepts Systemd

Installing Docker

- Docker Architecture
- Starting the Docker Daemon
- Docker Daemon Configuration
- Docker Control Socket
- Enabling TLS for Docker
- Lab Tasks
 - Installing Docker
 - Protecting Docker with TLS
 - Install Docker via Docker Machine

Managing Containers

- Creating a New Container
- Listing Containers
- Viewing Container Operational Details
- Running Commands in an Existing Container
- Interacting with a Running Container
- Stopping, Starting, and Removing Containers
- Copying files in/out of Containers
- Inspecting and Updating Containers
- Lab Tasks
 - Managing Containers
 - Configure a docker container to start at boot

Managing Images

- Docker Images
- Listing and Removing Images
- Searching for Images
- Downloading Images
- Committing Changes
- Uploading Images
- Export/Import Images
- Save/Load Images
- Lab Tasks
 - Docker Images
 - Docker Platform Images

Creating images with Dockerfile

- Dockerfile
- Caching
- docker build
- Dockerfile Instructions
- ENV and WORKDIR
- Running Commands
- Getting Files into the Image
- Defining container executable best practices
- Lab Tasks
 - Dockerfile Fundamentals

Docker Networking

- Overview
- Data-Link Layer Details
- Network Layer Details
- Hostnames and DNS
- Local Host <--> Container
- Container <--> Container (same node)

- Container <--> Container: Links
- Container <--> Container: private network
- Managing private networks
- Remote Host <--> Container
- Multi-host networks with overlay driver
- Lab Tasks
 - Docker Networking
 - Docker Ports and Links
 - Multi-host networks

Docker Volumes

- Volume Concepts
- Creating and Using Volumes
- Managing volumes (cont.)
- Changing Data in Volumes
- Removing Volumes
- Backing up Volumes
- SELinux Considerations
- Mapping Devices
- Lab Tasks
 - Docker Volumes

Docker Compose / Swarm

- Concepts
- Compose CLI
- Defining a Service Set
- Docker Swarm
- Lab Tasks
 - Docker Compose
 - Docker Swarm

Docker Registry

- Lab Tasks

Continuous Integration with GitLab, GitLab CI, and Docker

- Lab Tasks
 - GitLab and GitLab CI Setup
 - Unit and Functional Tests
