HP course # H0DR9AAE

Category ConvergedSystem

Duration 2 hours

Audience

- System architects, engineers, and consultants who will plan and implement HP OneView and vRealize Operations Manager integration.

Prerequisites

- Before you take this course you should be familiar with HP OneView and system administration experience with vSphere deployments.

Course objectives

By the end of the course, you should be able to meet the following objectives:

- Explain the problems and issues facing a business and its IT Infrastructure.
- Manage your environment and how some of the company problems can be resolved by using HP OneView.
- Shows the flexible integration of HPE OneView and VMware vRealize Operations Manager to help the company and his team resolve more of their current IT problems.

Course outline

Module 1: HP OneView Overview

- Describe HP OneView and its positioning
- Describe the HP OneView resource model
- List what is new in HP OneView 2.0

Module 2: vRealize Operations Manager Suite

- Describe how vRealize Operations Manager is used to manage the software-defined data centre
- Describe the features and benefits of vRealize Operations Manager

Module 3: HP OneView + VMware vRealize Operations Manager

- Introduce the HP OneView integration with the vCenter Operations Management Suite
- Visualize the connectivity between storage, compute, and virtualized workloads while combining physical and virtual views of your virtualized infrastructure within vCenter
- Proactive monitoring for performance, health and capacity
- HP OneView Dashboard
- Demo/video showing One View and Operations manager dashboards to display Health, Risk, and Efficiency badges.
- Troubleshooting in four easy steps
