H8P96X Scality Advanced Operation Training

The Scality Technical Certification Program is a 3-day, hands-on RING certification training that will enable Certified RING Engineers to demonstrate technical skills and expertise inside customers' environments including:

- A deep understanding of the hardware and OS requirements necessary to install the RING
- The ability to install the RING
- The capabilities to test the RING installation
- A high-level understanding of RING operations
- The ability to triage RING support requests

Training Prerequisites:

In order to qualify to attend the Scality Technical Certification Program, candidates should have working knowledge of:

- Linux (LFCE or LPIC-3 or equivalent)
- Networking concepts (LAN, WAN)
- Storage concepts (SAN, NAS, Object storage & Software-defined Storage)
- Data transfer/access protocols (SMB, NSF, Fuse, REST)

Training Environment:

Only 4-5 participants attend each training session, ensuring that attendees are given direct access to the instructor and receive as much attention as they require.

Training Certification and Post-Certification Support:

Certification is delivered at the end of the training, following instruction and review of the installation process and verification of a successful RING installation. After completion of the training, Certified RING Engineers will have access to the Scality documentation library, receive support from Scality Partners, and will have premier access to new releases and product information.

Delivery

The Scality Training Certification Program teaches participants about Scality's RING Delivery Workflow, the same method for delivery that Scality's engineering team has developed from years of installation experience, lessons learned, and best practices. The Ring Delivery Workflow leverages the RASCI (Responsible, Accountable, Supportive, Consulting, and Informative) method for delivery, ensuring smooth and successful RING deployments at customer datacenters by Certified RING Engineers.

<u>Support</u>

As part of the Scality Training Certification Program, Certified RING Engineers will have access to a rich set of product documentation, a dedicated Scality support team, an advanced ticketing system, and support communication tools.
