

HPE Systems Insight Manager 7.4 and forward

HPE Systems Insight Manager is the clear choice for managing HPE servers, storage, and networking. It is an easy, simple, and inexpensive way for HPE system administrators to improve system uptime and health.

- Provides hardware level management for HPE servers, storage, and networking
- Enables control of Windows®, HP-UX, Linux®, OpenVMS, and NonStop environments
- Integrated with HPE Insight Remote Support software, it provides contracts and warranty management, and automates remote support
- Provides version control and easy firmware update distribution
- Integrates easily with HPE Insight Control and HPE Matrix Operating Environment that enables you not only to proactively manage your server health, whether physical or virtual, but also to deploy servers quickly, reduce power consumption, and fine-tune infrastructure confidently with capacity planning

Unify infrastructure management

HPE Systems Insight Manager bridges islands of management by unifying the management of your servers, storage, and networking devices. It gives you a single tool for managing virtual and physical infrastructures.

With HPE Systems Insight Manager you gain an extensible, standards-based platform for managing server, networking, and storage hardware assets, increasing application availability, and improving the efficiency and flexibility of technology resources.

Integration of the HPE Software products, HPE Insight Control, and HPE Matrix Operating Environment software suites, provides additional control. The combination of these offerings enables a simple and effective management of your infrastructure. A unified infrastructure management environment also enables the cross-training of technology staff, helping your organization to respond quickly to complex management challenges.

Manage your assets

HPE Systems Insight Manager enables you to easily manage your assets and inventory. It performs comprehensive system data collection and enables users to quickly produce detailed inventory reports based on the latest industry standards.

Reduce downtime

HPE Systems Insight Manager provides proactive notification of actual or impending component failure alerts. Automatic Event Handling allows users to configure policies to execute scripts, forward events, and to notify appropriate users about impending failures. Users can take action and repair or replace failing components in a timely manner, thus offering smooth operation.

Manage warranty and contracts

HPE Systems Insight Manager can automatically download the most current warranty and contract details from HPE. Details are displayed for each server and storage device with custom reports, allowing you to automate your current manual entitlement tracking processes. HPE Systems Insight Manager can also notify you 90, 60, or 30 days prior to a warranty or support contract expiration.

Use integrated support to improve availability

HPE Insight Remote Support is integrated with HPE Systems Insight Manager. When HPE Systems Insight Manager receives a problem alert from a server or storage device, it can automatically open a support ticket with HPE.

HPE Systems Insight Manager can track the progress of the support ticket and advise you about status changes. You can generate reports that include call details with HPE case ID number and call status.

HPE Insight Remote Support provides intelligent alert details to help you easily identify both the problem and the actual part that has failed. Additionally, HPE Insight Remote Support provides extensive troubleshooting resources, including self-repair videos and parts schematics and diagrams. It is available at no additional cost for devices under HPE warranty, Care Pack or contract services.

Leverage proven technology

HPE Systems Insight Manager builds on field-proven technology that supports Microsoft® Windows, Linux, and UNIX® operating systems and provides virtualization and automation capabilities. As the HPE platform for the unified management of HPE servers and storage, HPE Systems Insight Manager is the only tool available that supports all three leading operating systems.

Further, it delivers detailed fault monitoring, inventory reporting, and configuration management for HPE ProLiant, and HPE Integrity servers. It also manages HPE Storage MSA, EVA, XP, and HPE 3PAR arrays and various third-party arrays, through a Web-based GUI or command line. The latest release of HPE Systems Insight Manager can also be used to manage HPE Networking Products—Series A.

The use of HPE management solutions in conjunction with recognized industry standards and technologies provides the confidence and flexibility you need to effectively manage the business technology of your infrastructure. With HPE Systems Insight Manager, HPE Insight software, HPE Insight Control, and HPE Matrix Environment, you can take advantage of gains in efficiency and productivity. This allows you to spend less time on everyday infrastructure maintenance and focus more time on driving innovation and business value. HPE Systems Insight Manager and its plug-ins complement and extend management solutions for the adaptive enterprise.

Key features

Among other capabilities, HPE Systems Insight Manager 7.4 and forward:

- Manages up to 5,000 servers (physical or virtual) and up to 10,000 systems from one single Central Management Server (CMS). With the federated CMS search feature it enables users to search for specific data within multi-CMS environments.
- Provides Agentless Management for the latest ProLiant Gen8 and Gen9 servers for simple initial setup and ongoing management.
- It integrates with HPE Smart Update Manager for easy and quick firmware update distribution for all components within a BladeSystem enclosure. With the latest release, two easily accessible tools are introduced to help you manage your firmware baselines and versions.
- Provides support for HPE BladeSystem c-Class blade, enclosure, and onboard administrator.
- Integrates with group lists and authorization as an active directory resource group.
- Provides base-level management of HPE clients, printers, and select storage and networking; can be extended with HPE Client Manager, HPE Web Jetadmin, and HPE Storage Command View EVA software storage management for more advanced management features.
- Serves as a central access point for HPE Insight software, and integrates with HPE Software products.
- Facilitates dependable, scheduled execution of OS commands, batch files, and custom or off-the-shelf applications across groups of Windows, Linux, or HP-UX systems.
- Enables dependable management through support for SSL, SSH, and OS authentication and role-based security.
- Installs on Windows, Linux, and HP-UX.

Data sheet

Customize your IT lifecycle management, from acquisition of new IT, management of existing assets, and removal of unneeded equipment. hp.com/go/hpfinancialservices

Ordering information

To download HPE Systems Insight Manager (at no additional charge to existing HPE server and storage customers) and to get more information on plug-ins, go to hp.com/go/hpsim.

HPE Services

Whether adopting HPE Systems Insight Manager software for the first time, or upgrading an existing infrastructure, HPE Technology services can help you manage change, cut operating costs, and deliver continuous care.

Available services include:

HPE Insight software portfolio of Installation and Startup services

Include options for HPE Systems Insight Manager with HPE Insight Remote Support Advanced. Also available are more comprehensive implementation services that can be tailored to meet your specific requirements.

HPE Software Technical Support Service

Covers all the key modules of the Insight software portfolio, including for HPE Systems Insight Manager and Insight Remote Support. You receive expert assistance through telephone and online access to experienced HPE support professionals, rapid problem diagnosis and resolution, product and support information, and software patches.

To fully capitalize on your technology solution, you need a partner who thoroughly understands your multi-vendor technology environment. HPE Technology Services has those unique insights and can provide services designed to help you get the most from your technology.
